

Texas AgriLife Research, Blackland Research and Extension Center

720 E Blackland Rd

Texas AgriLife Blackland Research and Extension Center (formerly Texas Agricultural Experiment Station) has been a key asset that has boosted Central Texans' quality of life and economic stability. Since its opening in 1910, the Blackland Research and Extension Center (BREC) has been an essential partner in the diversity and growth of Central Texas by equipping farmers and stockmen with the knowledge they need to gain the most from their labors. As times changed, so has the Center's focus. It has remained on the forefront of research, meeting the needs of farmers, agribusinesses and conservationists. Soil and water quality affect all residents, not just those who till the soil or graze stock.
